

Wireless - Tranzeo AP-5A

Version 1.0

This TCP probe queries a Tranzeo TR-AP through HTTP GET requests.

Thresholds:

None

Version: Included with WISPerMapper 4.3. Part of bundle 1.1. Requires InterMapper 4.3 or later.

License: IMWirelessAdd-on (WISPerMapper wireless device)

Supported Equipment: Tranzeo TR-AP-5A

TCP Probe: This probe uses a series of HTTP GET requests to gather information from the device's web interface. SNMP information, including traffic and interfaces, is not available.

Port: By default the HTTP (web) administration interface used by this probe runs on port 80.

Login: This probe requires the login name and password used by the HTTP (web) interface, as a parameter.

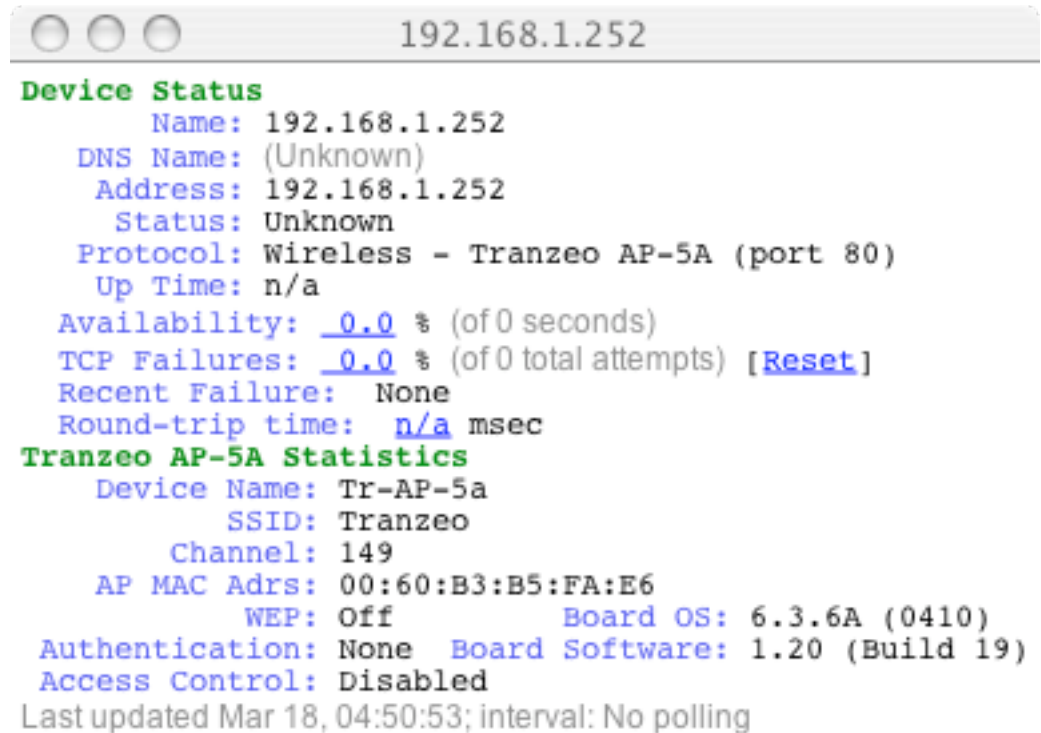

Glossary of Terms:

SSID: The network ID of the radio.

Channel: The numerical channel being used by the radio.

AP MAC Adrs: The MAC address of the radio.

Related Probes: The TR-CPE-5A requires the appropriately named separate probe. Tranzeo 400- and 4000-series radios operating as an AP require the "Tranzeo (AP)" probe. Tranzeo 1000-, 2000-, and 3000-series gear will require the upcoming "Tranzeo (Classic)" probe or updated firmware version 3.4.31. 5000-series gear is not currently supported.
